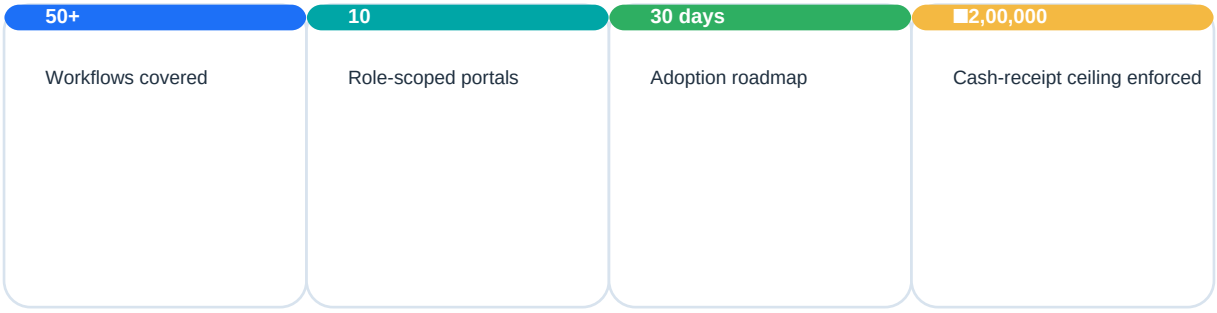
1 | Executive Summary

Society administration should not depend on manual registers, scattered WhatsApp messages, Excel workbooks and the memory of one or two committee members.

ApexEstateHub brings the operational back office into one browser-based platform. It combines automated receivables, double-entry cashbook, bank reconciliation, secure signed QR gate access, complaints, events, polls, NOCs, assets, reports and resident self-service — all without page reloads.

Built for Uttar Pradesh Apartment Owners' Associations (UP Apartment Act, 2010; UP Apartment Rules, 2011; Model Bye-Laws, 2011), with Central tax laws layered on top. Every statutory threshold is dated data, not hard-coded, so a change in law is a data row — never a redeploy.



From fragmented work to a controlled workflow

BEFORE	WITH APEXESTATEHUB
WhatsApp reminders and manual follow-up	Dues visible to owners; channels broadcast reminders
Excel-based bank reconciliation	Exact match → fuzzy match → row-by-row reconciliation
Paper receipts and cashbook	Receipts, vouchers and month-wise double-entry ledger
Handwritten gate passes	HMAC-signed, versioned QR passes; camera + NFC scanning
Complaints buried in chat	Raise → assign → vendor bid → resolve with audit trail

“Stop managing your society. Start leading it.”

2 | The Pain Landscape

A day in the life of Rajesh, Society Secretary, Sunrise Residency (120 flats).

Rajesh is a retired bank manager who volunteered as Secretary. He knows accounts and people — and still every Monday begins with a fresh pile of unfinished work.

08:30	**Dues chase** Three owners ask for maintenance balances on WhatsApp. Rajesh checks an old Excel sheet and replies one by one.
10:15	**Bank reconciliation** A bank statement arrives. He compares rows manually against another workbook, marking possible matches.
12:00	**Gate pass** A contractor needs access. Rajesh prepares a pass, sends a photo to security and hopes the latest version reaches the gate.
14:30	**Complaints** Fifteen messages arrive: seepage, lift noise, plumbing, parking. No single queue, owner, deadline or audit trail.
17:00	**Cashbook** He starts the monthly cashbook. One figure does not agree. He searches paper vouchers and old messages.
19:30	**NOC search** An owner needs a copy of an NOC issued six months ago. He searches folders, email and WhatsApp.

He is doing the work. The problem is that the work is scattered.

“There has to be a better way.”

3 | EstateHub at a Glance

Ten role-scoped portals. One operating model. Each login sees only the rows its role is scoped to.

MASTER ADMIN

Platform operator\n\nPlatform oversight • societies • plans • statutory rule data

SOCIETY ADMIN

Secretary / Treasurer / MC\n\nDashboard • finance • operations • compliance

APARTMENT OWNER

Owner / family / tenant\n\nDues • concerns • events • gate pass • bills paid

VENDOR

Service contractor\n\nPass status • charges • gate QR • bid on concerns

SECURITY GUARD

Gate staff\n\nQR scanner • attendance • gate log • walk-ins

ACCOUNTANT

Finance preparer\n\nReceipts • expenses • dues • cashbook • TDS & GST

SUPERVISOR

Gate & field oversight\n\nGate & security • users • concerns • events

STAFF

General society staff\n\nConcerns • events • alert channels

AUDITOR	ADVISER
Statutory / internal auditor\n\nVerify checks • books • receipts • financials (read-only)	CA / Advocate / Auditor\n\nAppointment-bound masked ledger export

Design principle: role-scoped by default. The Admin gets the control plane; residents get self-service; vendors and guards get focused workflows; the Master Admin gets platform-level management — with no society-data capability.

4 | The Admin Portal

The committee's operational control room — scoped to one society.

Dashboard

Dues, receipts, gate logs and open concerns in KPI cards.

Financials

Receipts, expenses, receivables, payables, cashbook, ledger.

Bank Reconcile

CSV/Excel upload; exact + fuzzy matching; row-by-row reconcile.

Enrolled

Apartments, vendors, security; bulk CSV upload.

Concerns

Raise → assign → vendor bid → resolve with audit trail.

Events

Create events, sell tickets, scan QR entry.

Polls

Create polls, collect owner votes, view results.

Gate Pass

QR validity, revoke/re-issue, browser NFC writing.

NOC

Eligibility gate → rich-text editor → print/PDF/email.

Customize

Drag-and-drop KPI layout + KPI SQL Inspector.

Settings

Setup Wizard, team logins, QR re-issue, password controls.

UP AOA Compliance

Bye-law 49 filings, undivided interest, s.22, bye-law 7, owner loans.

5 | Five Workflow Blueprints

System actions are automated where specified; people remain accountable for approvals and governance.

01 Monthly Dues Collection

Auto-generates receivables on the 1st → Owner sees dues → Admin sends reminder → Owner pays/disputes → FIFO allocation → SHA-256 receipt → cashbook updated → bank reconciled.

02 Vendor Gate Pass

Admin creates vendor and validity → Signed QR generated → Vendor downloads pass → Security scans → Entry IN logged → expiry/loss → revoke and re-issue → old QR invalid.

03 Maintenance Complaint

Owner raises concern → System timestamps → Admin assigns vendor → Vendor submits bid → Admin approves → Work completed → Owner confirms → audit trail closed.

04 NOC Issuance

Owner requests NOC → System checks zero dues → Admin edits rich-text NOC → Branded document generated → Print/PDF/email delivered. If ineligible, outstanding amount is shown.

05 New Society Onboarding

First login → Setup Wizard → Society Details → Tax & Compliance → Billing & Accounts → Brought-forward balances → Agreement e-sign → Society goes live.

Demonstrated end-to-end: dues cycle, gate QR scan, concern resolution and NOC issuance follow the society's real operating workflow.

6 | The Financial Promise

Why administrators can trust the workflow behind the numbers.

Double-entry accounting

Every receipt and expense posts paired Dr/Cr legs; a deferred balance trigger refuses an unbalanced journal at commit.

FIFO allocation

Oldest dues first; interest cleared before principal; selective Pay Dues settles mixed funds per row.

SHA-256 receipt hashing

Receipt numbers form a cryptographic hash chain; altering a historical receipt breaks every later link.

Bank reconciliation

Exact match first, fuzzy match next, then manual row-by-row reconciliation per bank account.

GST / TDS defaults

GST billed only above the ■7,500/member and ■20 lakh turnover gate; effective-dated TDS sections and rates.

One-click reports

Cashbook, ledger, receivables, receipts, expenses and six financial statements export to CSV/Excel.

“At the AGM, Rajesh projected the cashbook on the hall screen. For the first time in 11 years, every rupee was accounted for, to the paisa.”

Illustrative testimonial — replace with verified customer evidence before public release.

7 | Statutory Compliance — Built for UP AOAs

Six things the software will not let anyone do — enforced inside the database, so a screen, a bug or a hurried user cannot get round them.

Quietly change the books

Posted ledger lines are immutable; mistakes are corrected only by a visible reversal. A SHA-256 hash chain plus signed anchor certificates filed with the CA make any rewrite show.

Post an unbalanced voucher

A deferred balance trigger refuses any journal that does not balance. Cash vouchers are provenance- and amount-checked against their source document.

Reopen a locked year

After year-end close, the Treasurer alone can lock it irreversibly; nothing can be posted into that or any earlier year, and a signed ledger anchor is taken first.

Apply a rule without showing its authority

53 UP rules carry source text and status (38 checked, 13 provisional, 2 disputed). Rule changes are dated, non-retroactive and audited.

Pass a resolution on a typed number

Quorum (30% floor) and majority are derived from attendance and vote registers, each flat weighted by undivided interest, measured against all owners — not votes cast.

Hide a tax assumption

Cash receipts of ■2,00,000+ from one payer in a day are refused. GST is charged only when turnover clearly exceeds ■20 lakh and a member's charge exceeds ■7,500; contested heads are held for the CA.

What we do not claim: no return filing, no TRACES/GST e-filing, no Section 80P/80AC computation, no DPDP certification (parameters marked [Verify]), no e-invoicing, and no automated breach notification. EstateHub prepares and protects the books — it does not replace the society's CA and advocate.

8 | Security, Privacy & Reliability

Trust built into every layer — never sourced from the browser.

Signed QR passes

HMAC-SHA256 signed, versioned passes keyed per society under SECRET_VAULT_KEY; revoke and re-issue invalidates old codes.

Two-actor visitor approval

Owner confirmation required before visitor admission; the guard cannot approve its own alert.

Anti-spoofing patrol

GPS geo-fence (50 m) plus travel-speed check (>25 km/h rejected); 60-second expiring epoch QR for attendance.

Role-scoped access

Explicit capability sets, no wildcards; tenant isolation is a hard deny; platform operators have no society-data capability.

DPDP Act machinery

Versioned notice gate, purpose-bound consent, rights register (access/correction/erasure/nominee/grievance), breach register, profile-only erasure.

Immutable audit trail

Actor, role, society, action, before/after values, reason, correlation id and IP — append-only, trigger-guarded, credentials stripped.

9 | Resident Experience

Routine queries become self-service — from a phone.

Know your dues

See pending dues, payment history and your own ledger passbook.

Raise a concern

Submit and track complaints in real time; invite vendors or be assigned directly.

Join events

Buy tickets and use QR-based venue entry; tickets marked used on scan to prevent double-scan.

Vote in polls

One vote per apartment, secret ballot, weighted by undivided interest; quorum 30%, majority 51%.

Carry your pass

Download your personal gate-pass QR; visitor pre-registration and gate alerts.

Control alerts

Subscribe or unsubscribe from school bus, taxi and visitor broadcast channels.

“Earlier I had to call the secretary to find out my maintenance balance. Now I open the app and it's there — to the paisa, with every payment history.”

— Priya Sharma, Flat A-203, Sunrise Residency (illustrative)

10 | Adoption Roadmap

From paper to platform in 30 days.

WEEK	ACTION	TOOLS
1	Society details, logo and signing setup	Setup Wizard • Image upload
2	Bulk enrol apartments, vendors and security (XLSX)	Bulk CSV enrol
3	Issue QR passes; onboard security; invite owners	QR modal • Security portal
4	Generate receivables; verify cashbook; issue NOC	Financial engine • NOC
ONGOING	Reconcile statements; export AGM reports	Bank reconcile • Reports

“From Day 30 onwards, EstateHub runs the back-office. The Secretary runs the society.”

11 | Plans & Call to Action

Simple, society-sized pricing. Every plan includes role-scoped portals, signed QR gate access and the full statutory engine.

STARTER	PROFESSIONAL	ENTERPRISE
■ **TBD** Smaller communities Core administration Resident self-service	■ **TBD** Growing societies Financial workflows Gate + concerns + reports	■ **TBD** Portfolios / operators Multi-society management Advanced controls

Request a live demonstration

See the Admin dashboard, run a sample dues cycle, scan a gate QR, raise a concern and issue an NOC. The demonstration can follow your society's real operating workflow.

12 | Frequently Asked Questions

Straight answers for committees evaluating the platform.

Our committee is not tech-savvy.

Role-based screens and a guided Setup Wizard; adoption begins with controlled, 30-day onboarding.

What if the internet goes down?

Live cloud functions depend on connectivity; the final deployment should define the society's outage contingency procedure.

We have 30 years of paper records—how do we migrate?

Bulk-enrolment templates for current apartments, vendors and staff; historical financials follow agreed opening balances and retention rules.

Is our financial data safe on the cloud?

Tenant isolation, authentication, managed PostgreSQL and backups; final hosting and access controls reviewed before approval.

Can we customise dashboard KPIs?

Yes — a drag-and-drop KPI layout editor and KPI SQL Inspector per portal and tab.

What happens if we cancel?

Cancellation/export policy should be stated in the subscription terms; data exports are available on demand.

Our vendors don't have smartphones?

Vendor workflows are defined; the exact non-smartphone fallback documented in the deployment SOP.

We already have a WhatsApp group—why do we need this?

WhatsApp stays useful for conversation. EstateHub provides structured records for finance, complaints, gate access and governance.

Can bank reconciliation handle our co-operative bank's format?

CSV/Excel upload with exact and fuzzy matching; the bank's actual format tested during onboarding.

Will receipts be legally valid for income-tax purposes?

Receipt records and SHA-256 hashing are provided; legal/tax validity depends on applicable law and the society's processes.

Can multiple committee members log in simultaneously?

Role-based architecture is designed for multiple authorised users, subject to the account and authentication policy.

How are partial payments handled?

FIFO allocation applies payments to the oldest dues first, with interest cleared before principal.

Marketing claims, pricing, metrics and testimonials marked as placeholders should be verified before commercial publication.
